COMPANY PROFILE 2026

R2K NEXUS

Hazardous chemical information management,
digital SDS registers and managed compliance
support

RIGHT INFORMATION. AVAILABLE WHERE WORK HAPPENS.

R2K Nexus (Pty) Ltd

Right information. Available where work happens.

R2K Nexus (Pty) Ltd provides digital and managed services that help industrial organisations structure, maintain and make hazardous chemical information available across their operations.

Our HAZMAT R2K offering combines a multi-platform digital register with remote administration and, where required, onsite assessment, recurring assurance and user awareness services.

OUR PURPOSE

Reduce the operational burden of SDS governance while improving access, accountability and audit readiness.

Site-specific information
Registers are structured around operations, sections, locations, products and responsible people.

Digital and mobile access
The HAZMAT R2K application supports Windows, Android and iOS, with online and offline access.

Unrestricted user access
Approved users can access the platform across multiple devices without per-user limits.

Managed service delivery
R2K combines platform capability, data administration and optional onsite assurance services.

F E A T U R E D : H A Z M A T R 2 K

The challenge is not storing documents. It is governing information.

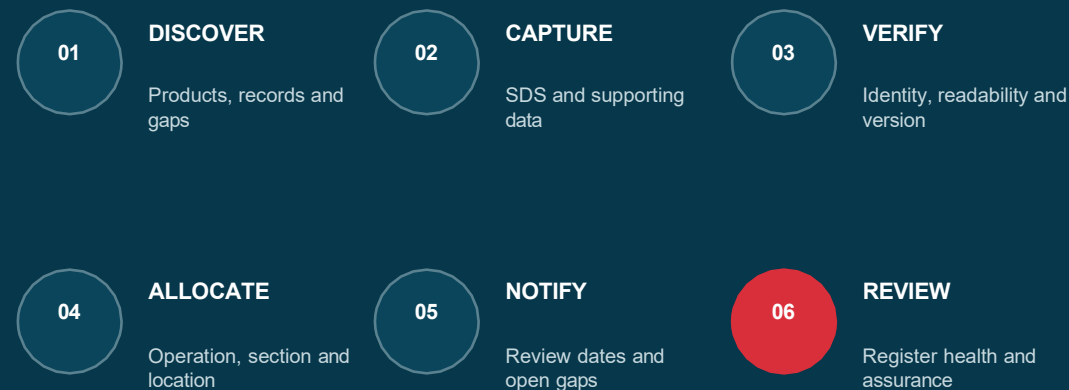

Hazardous chemical registers often weaken when ownership, source documents and site changes are managed through disconnected processes.

COMMON FAILURE POINTS

- No clearly assigned owner for the hazardous chemical register
- Missing, incomplete or outdated Safety Data Sheets
- New products introduced by contractors or vendors without verification
- Inconsistent or absent risk-ranking information
- SDS information difficult to locate at the point of need

THE R2K RESPONSE

A governed information service turns scattered documents into a structured, accessible and maintainable operational register.

HAZMAT R2K: one digital register across the operation.

The platform enables structured capture, maintenance and retrieval of SDS information supplied by sites, vendors, contractors and chemical manufacturers.

Registry management
Create, update and maintain hazardous material entries.

Site and location allocation
Structure information by operation, section and storage location.

Advanced search
Locate SDS, supplier, manufacturer and storage information quickly.

HAZMAT R2K

DIGITAL HAZARDOUS MATERIALS REGISTER

iOS

Document management
Maintain SDS and supporting SHEQ or emergency documents.

Review and revision control
Track current versions, review dates and record history.

Approved user access
Support unrestricted authorised users across multiple devices.

Previously downloaded content remains available offline and synchronises when connectivity is restored.

R2K NEXUS | COMPANY PROFILE 2026

04

Two service pathways. One scalable data foundation.

Start with a managed digital SDS register. Add onsite assurance when operational complexity, audit exposure or internal capacity requires it.

R2K HAZMAT CORE

Managed Digital SDS Register

- Capture and index supplied electronic or readable scanned SDS
- Source exact supplier or manufacturer SDS on a reasonable-efforts basis
- Allocate records by operation, section and location
- Maintain review alerts, revision controls and version history
- Provide unlimited approved-user access online and offline
- Administer the register remotely and report on register health

BEST FOR: KNOWN INVENTORY + INTERNAL COORDINATOR

FULL MANAGED / ASSURANCE

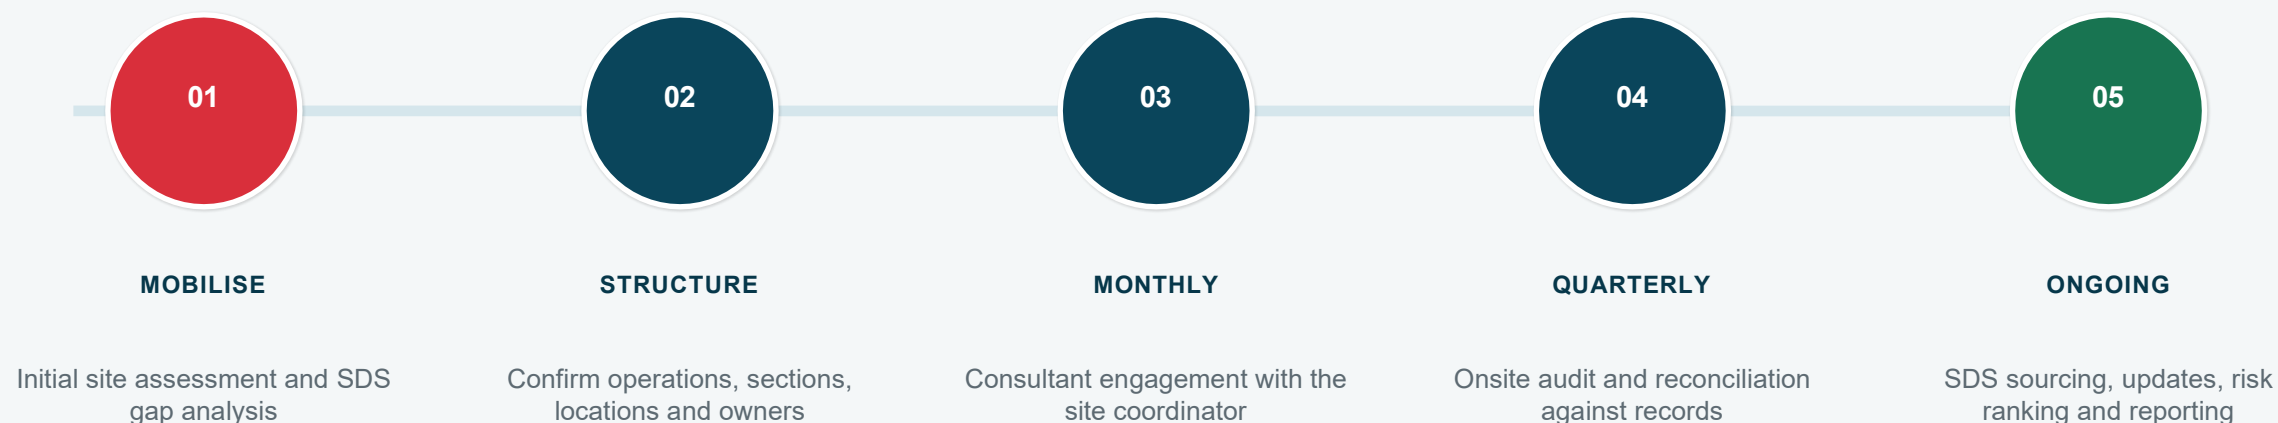

Digital register + onsite governance

- Everything included in R2K HAZMAT Core
- Initial onsite SDS and hazardous-material gap assessment
- Monthly consultant engagement and quarterly onsite audit
- Risk ranking, corrective-action and supplier gap-fill support
- GHS and HAZMAT R2K application awareness training
- Planned travel and accommodation for defined visits

BEST FOR: COMPLEX OR AUDIT-EXPOSED OPERATIONS

Full Managed / Assurance: digital control backed by recurring human service.

The Full Managed service is designed as an outsourced operating model, not a software-only subscription.

ONE ACCOUNTABLE SERVICE OWNER

R2K coordinates the agreed register-management, sourcing, review and onsite-assurance activities while the customer retains statutory duties and operational control of the workplace.

A register is only useful when its records can be trusted.

R2K uses visible record states and source controls to distinguish verified supplier documents from pending, reference, archived or incomplete records.

VERIFIED SUPPLIER / MANUFACTURER SDS

Exact product and source match; current version captured.

CUSTOMER-SUPPLIED - PENDING VERIFICATION

Provenance displayed while product identity and version are checked.

REFERENCE - PENDING SUPPLIER CONFIRMATION

Reference information only; not represented as the exact SDS for a branded mixture.

SUPERSEDED / ARCHIVED

Retained for version history and excluded from the active register.

REJECTED / INCOMPLETE

Unreadable, insufficiently identified or materially incomplete source.

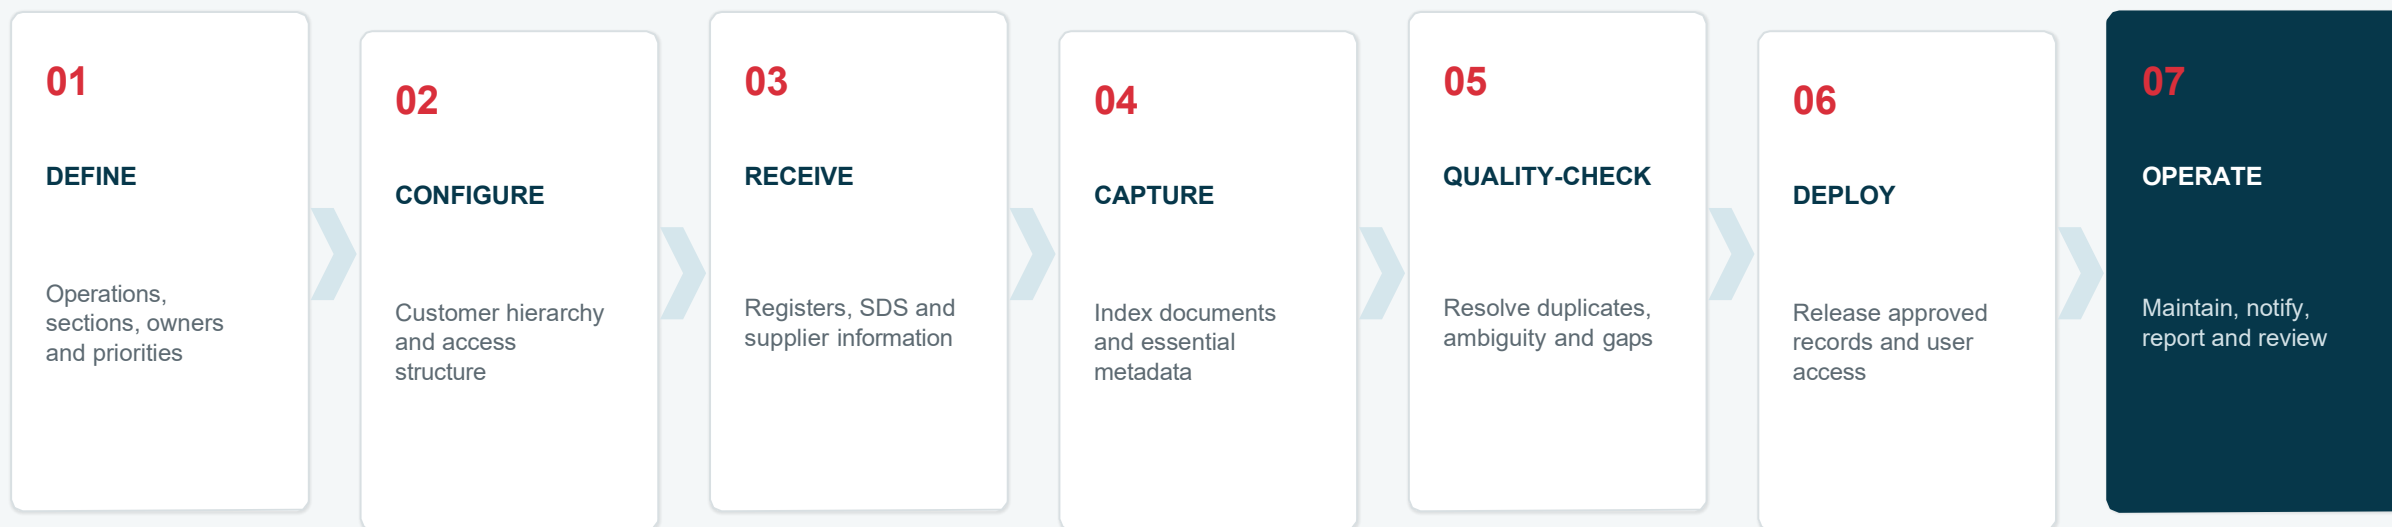

CONTROL PRINCIPLES

-  Exact-match sourcing before generic reference data
-  Source provenance and supplier/manufacture traceability
-  Readability, metadata and apparent structure checks
-  Review dates, revision alerts and open-gap tracking
-  Site, section and location allocation
-  Version history with superseded records retained

The status of unresolved information remains visible rather than being silently treated as complete.

A practical implementation path from source documents to service governance.

Implementation is structured to establish the operating hierarchy, load usable information, resolve exceptions and transition into the selected service cadence.

SCALABLE BY DESIGN

Core and Full Managed / Assurance use the same customer, site and document structure, supporting an upgrade without re-keying the register.

Designed for industrial operations where hazardous chemicals are used, stored or handled.

The service structure supports distinct operations or sites with accountable health, safety and environmental leadership and a requirement for an operation-specific register.

Commercially, an operation can be defined by physical location or a functional grouping of facilities, with scalable coverage as additional operations are onboarded.

What customers gain from a managed SDS information service.

The value is created through the combination of accessible technology, structured data and a defined service owner.

CURRENT INFORMATION

SDS and related records are captured, maintained and version-controlled.

ACCESS AT THE POINT OF NEED

Approved employees can use the register online or offline across devices.

IMPROVED AUDIT READINESS

Structured records, visible gaps and recurring reviews support assurance activities.

CLEARER ACCOUNTABILITY

Defined roles and reporting create ownership for register health and exceptions.

FASTER RETRIEVAL

Users can search products, SDS, suppliers, storage details and supporting documents.

SCALABLE GOVERNANCE

The same data model can grow across sections, sites and service levels.

ACCURATE INFORMATION. AVAILABLE TO AUTHORISED PEOPLE. STRUCTURED AROUND THE WAY THE SITE OPERATES.

Why R2K Nexus

A practical combination of platform capability, managed data and onsite service for operations that need more than document storage.

01

MANAGED SERVICE, NOT SOFTWARE-ONLY

The service can include register administration, sourcing, assessment, audit and training.

02

DIGITAL + ONSITE DELIVERY

Remote data management is supported by defined onsite cadence where assurance is required.

03

UNLIMITED APPROVED USERS

Access is not constrained by employee count or number of approved devices.

04

ONLINE AND OFFLINE AVAILABILITY

Previously downloaded information remains available when connectivity is limited.

05

SITE-SPECIFIC DATA STRUCTURE

Products, suppliers, locations and documents are organised around the operation.

06

A CLEAR UPGRADE PATH

Customers can begin with Core and add Full Managed / Assurance without rebuilding the register.

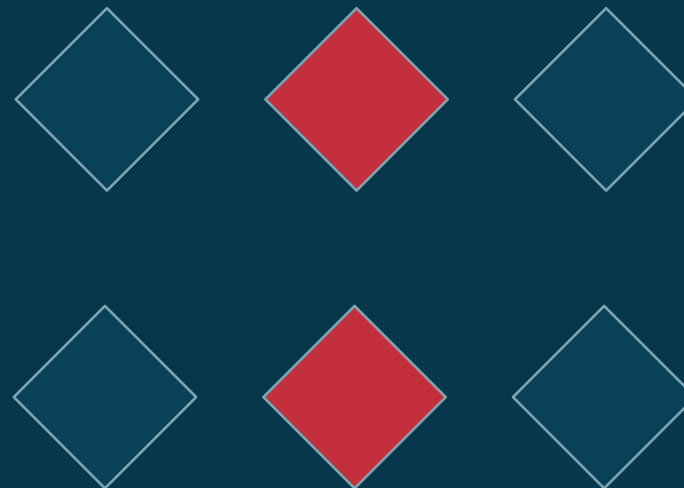

R2K supports the customer's compliance system through the activities expressly included in scope. The customer retains statutory duties, workplace control and responsibility for implementing operational controls.

LET'S MAKE HAZARDOUS CHEMICAL INFORMATION EASIER TO MANAGE - AND EASIER TO ACCESS.

Discuss your operations, SDS volumes and service requirements with R2K Nexus.
